

Mini Project: Build a Landing Page

Prompts and quick reference for this lesson

This PDF contains the main prompt from the Landing Page mini project plus a template you can adapt for your own product or service. Start a fresh session with /new before sending the prompt.

Use your own product. The prompt below uses my product as an example. Replace the product name, tagline, and description with your own. The sub-agent structure stays the same — one for copy, one for research, one for building the page.

The Prompt I Used in the Lesson

I want you to build me a complete landing page for my product. The product is called "Claude AI Operating System" and the tagline is "Turn Claude into your digital employee — a production-ready AI operating system that handles operations, content, research, and strategy. Connect all your existing tools into one system and run multiple businesses from your phone." I need you to use three sub-agents working simultaneously: Sub-agent 1 should write all the sales copy including the headline, subheadline, three key benefits, a features overview section, and a call to action with a "Book a Call" button. Sub-agent 2 should research competing AI operating system products and find unique selling points we should highlight to stand out. Sub-agent 3 should build the actual HTML landing page with modern styling, a dark theme, and a professional layout. Once all three are done, compile everything into the HTML page and send me the final file through Telegram.

Get the file after it's done

Send me the file through Telegram so I can download it.

Template for Your Own Product

Replace the parts in [BRACKETS] with your own details and send it to your agent:

I want you to build me a complete landing page for my product. The product is called "[YOUR PRODUCT NAME]" and the tagline is "[YOUR TAGLINE — one or two sentences describing what it does and who it's for]." I need you to use three sub-agents working simultaneously: Sub-agent 1 should write all the sales copy including the headline, subheadline, three key benefits, a features overview section, and a call to action with a "[YOUR CTA BUTTON TEXT e.g. Get Started, Book a Call, Try Free]" button. Sub-agent 2 should research competing [YOUR INDUSTRY] products and find unique selling points we should highlight to stand out. Sub-agent 3 should build the actual HTML landing page with modern styling, [YOUR PREFERRED THEME e.g. dark theme, light and minimal, bold colours], and a professional layout. Once all three are done, compile everything into the HTML page and send me the final file through Telegram.

What Each Sub-Agent Does

Sub-Agent	Task	Output
#1 — Copywriter	Writes headlines, benefits, features, and CTA text	Sales copy ready to drop into the page
#2 — Researcher	Looks at competing products and finds differentiators	Unique selling points to highlight
#3 — Builder	Creates the HTML page with styling and layout	Complete .html file you can open in a browser

What to Do After You Get the File

The landing page your agent builds is a starting point, not a finished product. Here are some things you can ask your agent to improve:

- "Rewrite the headline to be shorter and punchier"
- "Add a testimonials section with three placeholder quotes"
- "Change the colour scheme to match my brand colours: [hex codes]"
- "Add a pricing section with three tiers"
- "Make it mobile responsive"

The sub-agent pattern works for any big project. Not just landing pages. Business plans, client proposals, meeting prep, content creation — anything where the work can be split into parts that run at the same time. One agent researches, one writes, one builds. The main agent brings it all together.
