

Custom Tool Ideas For Your Mission Control

OpenClaw Masterclass — 40+ Ready-to-Use Prompts

How to use this guide

Each idea comes with a ready-to-use prompt you can copy into whichever communication channel you use to talk to your agent — whether that's Telegram, WhatsApp, Slack, Discord, or something else. Pick the tools that match your workflow, send the prompt to your agent, and let it build. Then iterate — tell your agent what's missing, what should be different, what extra sections you need. That's how every tool in your Mission Control gets built.

Every tool has a **Best for:** tag to help you quickly find what fits your situation. The prompts are starting points — adjust them to fit what you actually need before sending.

Mixing business and personal tools

Your Mission Control can hold both business tools and personal life tools side by side. You don't need to pick one or the other, and you don't need to set up two separate Mission Controls. A few simple approaches keep things clean:

- Add separate screens for personal stuff alongside business stuff — a Habit Tracker next to a Client CRM is totally fine
- Use tags or filters within a screen to separate personal from business items (for example a Goals Dashboard with both categories)
- Keep everything in one place for simplicity — your life and your business overlap anyway, so your dashboard can too

Business & Clients

Client CRM

Best for: freelancers, agencies, consultants

Track all your clients, conversations, and next actions in one place.

Add a Client CRM screen to our Mission Control. I want to see all my clients as cards with name, company, status (active, paused, past), current project, next action, and last contact date. Let me add new clients, edit them, and log conversations. Match the same dark style as everything else.

Lead Pipeline

Best for: sales, consultants, service businesses

Track prospects from first contact to closed deal.

Add a Lead Pipeline screen to our Mission Control. I want a kanban board with stages: New Lead, Qualified, Proposal Sent, Negotiation, Closed Won, Closed Lost. Each lead card should show name, company, deal value, and next follow-up date. Let me add, edit, and drag leads between stages.

Invoice Tracker

Best for: freelancers, agencies, anyone sending invoices

Outstanding invoices, overdue payments, and monthly revenue.

Add an Invoice Tracker screen to our Mission Control. I want to log invoices with client name, amount, due date, and status (draft, sent, paid, overdue). At the top show total outstanding, total overdue, and total paid this month. Highlight overdue invoices in red.

Proposal Tracker

Best for: consultants, agencies, sales teams

Track sent proposals with follow-up dates and win rates.

Add a Proposal Tracker screen to our Mission Control. Show all my proposals with prospect name, deal value, date sent, status (pending, won, lost), and follow-up date. Calculate my win rate over the last 3 months and show it at the top.

Testimonial Bank

Best for: service providers, creators, product businesses

Collect and organise client testimonials for marketing.

Add a Testimonial Bank screen to our Mission Control. Let me log client testimonials with client name, quote, date received, project it relates to, and permission status (can use publicly, internal only). Let me mark favourites for quick use in sales materials.

Offboarding Checklist

Best for: agencies, consultants, service teams

Steps for ending client engagements cleanly.

Add a Client Offboarding screen to our Mission Control. Let me create checklists for ending client engagements with tasks like final invoice, handover documents, credentials transfer, testimonial request, and follow-up scheduling. Track which clients are currently offboarding.

Content & Marketing

Content Calendar

Best for: creators, marketers, social media managers

Plan posts, videos, newsletters across all channels.

Add a Content Calendar screen to our Mission Control. Show a weekly view with my posts, videos, and newsletter issues scheduled across different channels (LinkedIn, YouTube, newsletter, etc.). Each item should show title, channel, publish date, and status (idea, drafting, scheduled, published).

Content Ideas Board

Best for: creators, writers, YouTubers, bloggers

A pool of content ideas with notes and priority.

Add a Content Ideas screen to our Mission Control. Show all my content ideas as cards with title, short description, target channel, priority (high, medium, low), and status (new, researching, ready, used). Let me search and filter by channel or status.

Competitor Watch

Best for: founders, marketers, product managers

Monitor what competitors are doing.

Add a Competitor Watch screen to our Mission Control. Let me track competitors with their name, website, pricing info, and recent activity. Add a log where I can note down what each competitor launches, posts, or changes. Show the most recent updates first.

SEO Keyword Tracker

Best for: SEO marketers, content writers, site owners

Target keywords, rankings, and content mapping.

Add an SEO Keyword Tracker screen to our Mission Control. Let me add keywords I'm targeting with current ranking, target ranking, search volume, and the content piece mapped to each one. Show keywords grouped by topic cluster.

Email Campaign Log

Best for: newsletter writers, email marketers

Track newsletter and email campaign performance.

Add an Email Campaign Log screen to our Mission Control. Log each email or newsletter send with date, subject line, audience size, open rate, click rate, and notes on what worked. Highlight top performers so I can learn what resonates.

Content Repurposing Tracker

Best for: creators with multiple channels

Turn one piece of content into many.

Add a Content Repurposing screen to our Mission Control. For each main piece of content (video, article, podcast) track which derivatives I've made – LinkedIn post, Twitter thread, newsletter section, short clip, quote card. Show what's still left to create from each source piece.

Operations & Monitoring

Health Check Dashboard

Best for: anyone running agents on a VPS

Server status, API connections, and agent performance.

Add a Health Check screen to our Mission Control. Show the status of my server, all connected APIs (OpenRouter, Anthropic, etc.), installed skills, and recent agent performance. Use green, yellow, red indicators. Let me know if anything needs attention.

Error Log

Best for: anyone running multiple automations

Recent errors from your agent and automations.

Add an Error Log screen to our Mission Control. Show recent errors from my agent, cron jobs, and automations with timestamp, error message, source, and status (new, investigating, resolved). Highlight unresolved errors in red.

Integration Status

Best for: anyone using multiple skills and APIs

Which skills and APIs are connected and working.

Add an Integration Status screen to our Mission Control. List all my installed skills and connected APIs with their status, last successful use, and any configuration notes. Show which ones need attention.

Automation Performance

Best for: anyone running scheduled jobs

How often automations run and their success rate.

Add an Automation Performance screen to our Mission Control. For each cron job and automation I have set up, show how many times it ran in the last 30 days, success rate, average runtime, and any failures. Highlight automations with low success rates.

Backup Status

Best for: anyone storing important data in workspace

Track backups, restores, and data safety.

Add a Backup Status screen to our Mission Control. Show when my last backup ran, what was backed up, size, and status. Let me manually trigger a backup or see restore options. Alert me if backups haven't run in over 48 hours.

Personal Productivity

Habit Tracker

Best for: anyone building new habits

Daily habits with streaks and completion rates.

Add a Habit Tracker screen to our Mission Control. Let me define daily habits and check them off each day. Show current streak for each habit, weekly completion rate, and a visual grid showing the last 30 days. Celebrate milestones like 7 day and 30 day streaks.

Reading List

Best for: learners, researchers, knowledge workers

Books, articles, and resources to consume.

Add a Reading List screen to our Mission Control. Let me track books, articles, and resources with title, author, type (book, article, video), status (to read, reading, finished), notes, and key takeaways. Filter by type and status.

Goals Dashboard

Best for: founders, creators, anyone with yearly targets

Yearly goals broken into quarterly milestones.

Add a Goals Dashboard screen to our Mission Control. Let me set yearly goals broken down into quarterly milestones and weekly actions. Show progress bars for each goal, current quarter focus, and this week's action items. Highlight goals that are falling behind.

Learning Log

Best for: course takers, students, career switchers

Courses you're taking, progress, and notes.

Add a Learning Log screen to our Mission Control. Track courses and learning resources with title, platform, progress percentage, estimated completion date, and my notes. Show what I'm currently learning at the top.

Weekly Review

Best for: founders, solopreneurs, anyone who wants to reflect

Structured reflection at the end of each week.

Add a Weekly Review screen to our Mission Control. Give me a template I can fill in every Friday with: biggest wins this week, what didn't work, key lessons, and priorities for next week. Show past reviews so I can look back at my progress over time.

Energy Journal

Best for: anyone optimising their schedule

Track energy levels to spot patterns.

Add an Energy Journal screen to our Mission Control. Let me log my energy level (1-10) at different points during the day along with what I was doing. Show a trend chart over time and help me spot what activities give or drain energy.

Focus Time Log

Best for: knowledge workers, writers, builders

Track deep work sessions and distractions.

Add a Focus Time Log screen to our Mission Control. Let me log deep work sessions with start time, duration, task worked on, and any distractions that came up. Show total focus time per day and per week, and which tasks got the most deep attention.

Finance & Growth

Revenue Dashboard

Best for: founders, solopreneurs, small business owners

Monthly revenue, growth trends, and source breakdown.

Add a Revenue Dashboard screen to our Mission Control. Show monthly revenue for the last 12 months with a trend chart, breakdown by revenue source (clients, products, consulting), and month-over-month growth percentage. Let me log new revenue entries with date, source, and amount.

Subscription Audit

Best for: anyone with lots of SaaS subscriptions

All your recurring subscriptions with costs and usage notes.

Add a Subscription Audit screen to our Mission Control. Let me list all my recurring subscriptions (tools, software, services) with name, monthly cost, annual cost, renewal date, and a usage rating (essential, useful, rarely used). Show total monthly spend and flag subscriptions I'm not using much.

Expense Tracker

Best for: freelancers, small business owners

Business expenses categorised with monthly totals.

Add an Expense Tracker screen to our Mission Control. Let me log business expenses with date, category (tools, marketing, contractors, etc.), description, and amount. Show monthly totals by category and a simple bar chart of where my money is going.

Cash Flow Forecast

Best for: founders, freelancers, small businesses

See what's coming in and going out over the next 90 days.

Add a Cash Flow Forecast screen to our Mission Control. Based on my recurring subscriptions, expected invoices, and known expenses, show me projected cash in and out over the next 90 days. Highlight months where I might be tight.

Investment Tracker

Best for: personal investors, portfolio managers

Portfolio positions and performance.

Add an Investment Tracker screen to our Mission Control. Let me log my investment positions with asset name, amount invested, current value, and percentage gain or loss. Show total portfolio value and overall return. Don't pull live prices – I'll update values manually.

Team & Collaboration

Team Directory

Best for: team leads, managers, agency owners

Team members, roles, and current assignments.

Add a Team Directory screen to our Mission Control. Show all my team members with name, role, contact info, current projects, and status (available, busy, away). Let me update assignments and see who has capacity.

Delegation Tracker

Best for: managers, founders, team leads

Track what you've delegated and follow-up dates.

Add a Delegation Tracker screen to our Mission Control. Let me log tasks I've delegated with task description, who it's assigned to, date delegated, expected completion date, and status. Highlight items that are overdue or coming up for follow-up.

Meeting Notes Archive

Best for: anyone who runs lots of meetings

Searchable notes from past meetings.

Add a Meeting Notes Archive screen to our Mission Control. Let me log meetings with date, attendees, topic, notes, and action items. Make it searchable so I can find any past discussion by date, person, or topic.

Feedback Log

Best for: managers, team leads, mentors

Feedback given and received, organised by person.

Add a Feedback Log screen to our Mission Control. Let me track feedback I've given to others and feedback I've received, with date, who it's from or to, topic, and my reflections. Show feedback patterns over time.

1-on-1 Tracker

Best for: managers, team leads

Track regular meetings with team members.

Add a 1-on-1 Tracker screen to our Mission Control. For each person I have regular 1-on-1s with, log date, topics discussed, action items, and follow-ups. Show last meeting date for each person so I know who's overdue for a check-in.

Products & Development

Feature Request Tracker

Best for: product owners, SaaS founders, developers

User requests with votes and priority.

Add a Feature Request Tracker screen to our Mission Control. Let me log feature requests with title, description, who requested it, vote count, status (new, under review, planned, building, shipped), and priority. Sort by vote count so the most requested features rise to the top.

Bug Report Board

Best for: product managers, developers, QA teams

Bugs reported with severity and status.

Add a Bug Report Board screen to our Mission Control. Let me log bugs with title, description, severity (critical, high, medium, low), status (new, investigating, fixing, resolved), and date reported. Sort critical bugs to the top.

Product Roadmap

Best for: product managers, founders

Upcoming features organised by release.

Add a Product Roadmap screen to our Mission Control. Show upcoming features organised by release (next release, Q2, Q3, later). Each feature should show title, short description, estimated effort, and priority. Let me drag features between releases as plans change.

Launch Checklist

Best for: founders, product managers, marketers

Tasks and milestones for upcoming launches.

Add a Launch Checklist screen to our Mission Control. Let me create checklists for product launches with tasks organised by phase (prep, soft launch, hard launch, post-launch). Each task should have an owner, due date, and status. Show overall launch readiness as a percentage.

User Interview Log

Best for: product managers, UX researchers, founders

Track user research conversations.

Add a User Interview Log screen to our Mission Control. For each user interview log date, participant, key questions asked, main insights, and any quotes worth keeping. Tag interviews by theme so I can find patterns across multiple conversations.

A/B Test Log

Best for: marketers, growth teams, product managers

Track experiments and results.

Add an A/B Test Log screen to our Mission Control. Let me log experiments with hypothesis, test setup, date started, date ended, result (winner, loser, inconclusive), and lessons learned. Show only active tests at the top, completed tests below.

Events & Life

Travel Planner

Best for: frequent travellers, digital nomads

Upcoming trips with bookings and checklists.

Add a Travel Planner screen to our Mission Control. For each trip log destination, dates, purpose, flights, accommodation, and a packing checklist. Show upcoming trips at the top with days until departure.

Event Planner

Best for: founders, event hosts, networkers

Track upcoming events and prep tasks.

Add an Event Planner screen to our Mission Control. For each event (conference, workshop, dinner) log date, location, attendees, prep tasks, and post-event follow-ups. Show events coming up in the next 30 days.

The Real Power Move

You don't have to pick from this list at all. Your agent knows you — your business, your projects, your workflows. So let it suggest what would actually help you most. Send this prompt:

```
Based on what you know about me, my business, my workflows, and my projects,
what are the top 3 custom tools I should build next for my Mission Control?
For each one, describe what it would do, what data it would show, and why it
would make my life easier.
```

How to Iterate

Whatever tool you build first, it won't be perfect straight away. That's fine. Look at what the agent made, and send follow-up prompts like these:

- *The layout is too narrow. Make the cards wider and fit them into two columns instead of three.*
- *Add a filter at the top so I can filter by status.*
- *Pull this data from the Task Board so I don't have to enter it twice.*
- *Add a summary card at the top showing the total count.*
- *Make the overdue items stand out in red.*

Every screen in Mission Control started life as a single prompt. Then you refine it, week by week, until it fits your workflow perfectly. That's the whole point.
