

Mission Control: Daily Standup Screen

OpenClaw Masterclass — Lesson Guide & All Prompts

What you'll build in this lesson:

- **Daily Standup screen** — morning briefing that lives inside your Mission Control
- **Three sections** — What happened yesterday, What's on today, Top 3 Focus
- **Google Calendar integration** — real meetings and deadlines pulled via the GOG skill
- **Morning cron job** — 7am weekday refresh with Telegram summary
- **Evening reflection** — 6pm weekday summary of what got done, feeds into next day's briefing
- **Visual polish** — coloured sections and highlighted priorities

All Prompts Used In This Lesson

Copy and paste these prompts into whichever communication channel you use to talk to your agent.

Prompt 1: Build the Daily Standup Screen

Add a Daily Standup screen to our Mission Control. When I open this screen I want to see a morning briefing that shows me: what happened yesterday - any tasks completed, any important activity from the activity feed, any memories the agent saved. What's on today - tasks that are in progress or due today from the Task Board, any scheduled jobs from the Calendar that are going to run today, any meetings or deadlines. And what I should focus on - a short list of the top 3 priorities for today based on the Task Board, my projects, and our mission statement. Also add a greeting at the top with the current date and a quick motivational line from my agent. Make it match the same dark style as everything else. After making the changes, rebuild for production and restart the server.

After the agent confirms, refresh your dashboard and click Daily Standup in the sidebar.

Prompt 2: Wire Google Calendar Through GOG Skill

The GOG skill is already installed. Use it to pull my Google Calendar events for today and tomorrow, and wire them into the Daily Standup meetings and deadlines section.

If your agent says it can't access Google Workspace, remind it that the GOG skill is installed and ask it to look in the skills directory.

Prompt 3: Add Test Calendar Events and Polish Visuals

Add two test events to my Google Calendar for today - one called Client check-in at 2pm for 30 minutes, and one called Content review at 4pm for 1 hour. Also add some colour to the Daily Standup screen to make it more visually engaging. Use different accent colours for each section and highlight the Top 3 priorities with colour. Keep the dark theme.

This gives you real events to verify the Calendar wiring and adds some colour to make the screen more pleasant to open every morning.

Prompt 4: Set Up Morning Cron Job (7am Weekdays)

Every weekday morning at 7am, refresh the Daily Standup screen with the latest data and also send me a short version of the briefing on Telegram so I can read it while I'm making coffee.

This means your briefing updates every weekday morning and you get a summary on Telegram before you even open the dashboard.

Prompt 5: Set Up Evening Reflection (6pm Weekdays)

Every weekday evening at 6pm, look at what tasks got moved to Done today, what's still in progress, and what didn't get touched. Save that as a memory and add a short summary to the Daily Standup screen under a new section called Yesterday's Reflection that appears the next morning.

The Yesterday's Reflection section will appear the morning after the cron job runs - don't expect to see it straight away.

Daily Standup Sections Explained

Section	What It Shows
Greeting	Good Morning with today's date and a short motivational line written by your agent.
What Happened Yesterday	Completed tasks, important agent activity, and memories saved by your agent.
What's On Today	In-progress tasks, scheduled cron jobs running today, and meetings/deadlines from Google Calendar.
Top 3 Focus	The three most important things to work on today based on Task Board, Projects, and mission statement.
Yesterday's Reflection	Appears the morning after the 6pm cron job runs. Shows what got done, what's still in progress, what didn't get touched.

Why the Top 3 Focus Section Matters

On any given day, you've probably got 20 different things you could work on. It's easy to spend your whole day on stuff that doesn't actually matter. The Top 3 Focus section fixes that.

Your agent looks at your Task Board, your Projects, and your mission statement, then picks the three things that will move the needle most today. Because it knows your goals, those three priorities are aligned with what you actually want to achieve - not just what's loudest.

If the Top 3 priorities don't feel right, it usually means your mission statement or your project priorities need clarifying. Review them and the Top 3 will get sharper.

The Morning + Evening Loop

Once you've got both cron jobs running, you've built a complete daily routine:

Time	What Happens
7:00am weekdays	Daily Standup refreshes with the latest data. A short summary is sent to your communication channel so you can read it while making coffee.
During the day	You and your agents work through tasks on the Task Board. Activity is logged automatically.
6:00pm weekdays	Agent looks at what got done, what's in progress, what wasn't touched. Saves a reflection as a memory and updates the Yesterday's Reflection section.
Next morning	You open Mission Control and see yesterday's reflection at the top, followed by today's briefing and Top 3 Focus.

Tips & Troubleshooting

Situation	What to do
Meetings section shows placeholder	Use Prompt 2 to wire in Google Calendar through the GOG skill. The skill must already be installed.
Agent says it can't access Google Workspace	Remind it that GOG is installed and ask it to look in the skills directory for the GOG skill documentation.
No meetings show up after wiring	That's fine if your calendar is empty for today/tomorrow. Add test events with Prompt 3 to verify it works.
Top 3 priorities feel random	Your mission statement or projects need more detail. Review the Team screen mission and update Projects with clearer priorities.
Yesterday's Reflection is missing	It only appears after the 6pm cron has run at least once. Check again the next morning.
Screen feels flat visually	Tell your agent: "Add more colour to the Daily Standup. Use different accents for each section and highlight the Top 3 priorities."
Morning summary not arriving	Check the Calendar screen to verify the 7am cron job is actually scheduled. If missing, ask agent to recreate it.
Mission Control crashed	Tell your agent: "Mission Control is down. Restart it on port 3007 in production mode."

What You've Built

- ✓ Daily Standup screen with greeting, motivational line, and today's date
- ✓ What Happened Yesterday section pulling from Task Board, activity, and memories
- ✓ What's On Today section with in-progress tasks, cron jobs, and meetings
- ✓ Top 3 Focus aligned with Task Board, Projects, and mission statement
- ✓ Real Google Calendar integration through the GOG skill
- ✓ 7am weekday morning refresh with summary sent to your communication channel
- ✓ 6pm weekday evening reflection capturing what got done
- ✓ Visual polish with colour accents on each section and Top 3 priorities
- ✓ A complete morning and evening routine built into Mission Control
