

Mission Control: Memories, Team & Office

OpenClaw Masterclass — Lesson Guide & All Prompts

What you'll build in this lesson:

- **Memories screen** — browse your agent's memory like a daily journal, organised by date
- **Team screen** — your agent roster with roles, mission statement, and sub-agents
- **Office screen** — 2D pixel art visualisation of your agents working in real time
- **Real wiring** — agents move to their desks when they pick up tasks from the board
- **Demo controls** — manually trigger agent movements (All Working, Gather, Run Meeting, Watercooler)

All Prompts Used In This Lesson

Copy and paste these prompts into Telegram in order.

Prompt 1: Build the Memories Screen

Add a Memories screen to our Mission Control. I want to browse your memory files organised by date, like a daily journal. Show me entries from each day with the date at the top and the memory content below. Let me click on any day to see the full details of what you remembered that day. Also add a search bar so I can find specific memories by keyword. After making the changes, rebuild for production and restart the server.

After the agent confirms, refresh your dashboard and click Memory in the sidebar.

Prompt 2: Build the Team Screen

Add a Team screen to our Mission Control. Show me a roster of all our agents and sub-agents. For the main agent show the name, role, and what they're responsible for. For sub-agents show the same – name, role, and responsibilities. Also add a mission statement at the top of the screen. Look at my User.md and everything you know about me and my business, and write a mission statement that captures what we're trying to achieve. After making the changes, rebuild for production and restart the server.

Prompt 3: Reverse Prompting for Mission Statement

Based on everything you know about me, what should our mission statement be?

If you don't have a mission statement yet, let the agent come up with one based on your goals and business context.

Prompt 4: Reverse Prompting — What Task Serves the Mission

What task can we do right now that brings us closer to our mission statement?

Use this when your agents are idle and you want to give them something meaningful to do.

Prompt 5: Build the Office Screen

Add an Office screen to our Mission Control. I want a 2D pixel art office that shows me and all the agents and sub-agents. Give each agent a desk. When an agent is working on something, they should go to their desk and I should be able to see what they're working on. When they're idle they can walk around. Make it fun and visual. Add a live activity feed on the side so I can see what's happening in real time. After making the changes, rebuild for production and restart the server.

Prompt 6: Turn Squares Into Pixel Characters

Make the agents in the Office screen look like actual pixel art characters instead of coloured squares. Give each one a small pixel art sprite with a head and body so they look like little people. Keep it simple but fun.

Use this if the first build shows agents as plain squares.

Prompt 7: Wire Office to Real Task Board Activity

Wire the Office screen to real agent activity. When you or a sub-agent starts working on a task from the task board, the agent in the office should automatically move to their desk and show what they're working on. When they finish, they should go idle. Pull this from the task board data and heartbeat activity.

This turns the office from a simulation into a real-time visual of what your agents are doing.

Prompt 8: Add Demo Controls

Add demo controls to the top of the Office screen. I want buttons for: All Working – sends everyone to their desks, Gather – brings everyone together in the middle, Run Meeting – agents meet around a table, and Watercooler – agents hang out and chat. Make the agents actually move when I click these buttons.

The agent will also add a Back to Live button that returns to real task-board-driven positions.

Prompt 9: Test by Assigning Task to Idle Agent

Create a new task on the Task Board called Research competitor landing pages. Assign it to Agent Atlas, set priority to medium, and move it straight to In Progress.

Watch the Office screen — the assigned agent should move from idle to their desk in real time.

Mission Statement — Why It Matters

The mission statement isn't just decoration. When your agents come up with proactive tasks to work on, they look at the mission statement and make sure whatever they're doing is actually moving you closer to your goals.

If your mission is to grow your business and scale your AI consulting, your agents will prioritise tasks that help with that instead of doing random work that doesn't move the needle.

How to use your mission statement:

- Ask your agent to reverse prompt: "What task brings us closer to our mission?"
- Use it during project planning to keep everything aligned
- Review it when your agents suggest new ideas — does this serve the mission?
- Update it as your business evolves

Office Demo Controls Reference

Button	What It Does
All Working	Sends every agent to their desk
Gather	Brings everyone to the middle of the office
Run Meeting	Agents sit around the meeting table
Watercooler	Agents move to the watercooler area
Back to Live	Returns to real task-board-driven positions

Tips & Troubleshooting

Situation	What to do
Agents show as coloured squares	Use Prompt 6 to turn them into pixel art characters with heads and bodies.
Office not reacting to task board	Use Prompt 7 to wire the Office to real task board activity.
Demo buttons do nothing	Make sure you used Prompt 8 and specified that agents should actually move.
Memories screen is empty	This means your agent hasn't built up much memory yet. Keep using it and memom
Mission statement feels generic	Ask the agent again with more context: "Based on my specific business goals and
Team roster shows wrong roles	Tell the agent: "Update the Team screen roles based on what each agent actually
Agent tested via chat but Office didn't respond	The Office only reacts to tasks on the Task Board. Create a task first, then assign
Office screen crashes	Tell your agent: "Mission Control is down. Restart it on port 3007 in production mo

What You've Built

- ✓ Memories screen — browse your agent's memory like a daily journal
- ✓ Searchable memories by keyword
- ✓ Team screen with agent roster, roles, and responsibilities
- ✓ Mission statement aligned with your business goals
- ✓ Office screen with 2D pixel art visualisation
- ✓ Pixel art characters for each agent
- ✓ Real wiring — agents move to desks when they pick up tasks
- ✓ Live activity feed reflecting real task board data
- ✓ Demo controls for manual agent movements
