

Mission Control: Projects & Documents

OpenClaw Masterclass — Lesson Guide & All Prompts

What you'll build in this lesson:

- Projects screen — track major projects with progress bars, statuses, milestones, and owners
- Portfolio snapshot — high-level view of all projects and their status
- Documents screen — searchable archive of all workspace files with category and file type filters
- Document viewer — click any document to read the full content
- Reverse prompting — let the agent suggest what to work on next based on project progress

All Prompts Used In This Lesson

Copy and paste these prompts into Telegram in order.

Prompt 1: Build the Projects Screen

Add a Projects screen to our Mission Control. I want to see all my major projects as cards with the project name, a short description, who owns it, a progress bar showing how far along we are, the current status like On Track or At Risk or Planning, and the next milestone. Make it so I can add new projects, edit them, and update the progress. Also add a portfolio snapshot on the side that gives me a quick high-level view of all projects and their status. After making the changes, rebuild for production and restart the server.

After the agent confirms, refresh your dashboard and click Projects in the sidebar.

Prompt 2: Add Your Projects

Replace these with your own projects. The agent will set statuses based on what it knows about you from User.md.

Add these projects to the Mission Control projects screen: 1) Claude AI Operating System — implementing full AI operating systems for clients. 2) AI Automation Agency — client projects for AI agents, workflow automation, and consulting. 3) OpenClaw Masterclass — course about setting up and using OpenClaw. Set the statuses based on what you know about where we are with each one.

Prompt 3: Reverse Prompting — What To Work On Next

Look at our projects in Mission Control. What's one task we can do right now that will help us make progress on one of our major projects?

The agent will look at all your projects, find the one that needs the most attention, and suggest a concrete next step.

Prompt 3b: If You Don't Know Your Projects

If you were to list the five most important projects we're working on right now, what would they be?

If you're not sure what your major projects are, let the agent figure them out based on your conversations and User.md.

Prompt 4: Build the Documents Screen

Add a Documents screen to our Mission Control. It should show all the documents, markdown files, and text files in our workspace. Make it searchable so I can find any document by filename or content. Add category tags so I can filter by type like journals, newsletters, docs, notes. And when I click on a document, show me the full content in a nicely formatted view. After making the changes, rebuild for production and restart the server.

Prompt 5: Add File Type Filters

Add file type filters to the Documents screen so I can filter by .md, .html, .pdf, .txt, and other file types.

Prompt 6: Fix Documents Layout (if needed)

The Documents screen layout broke after adding file type filters. The page is too wide, the category tags like journals, newsletters, docs, notes are missing from some views, and the document viewer panel on the right is too narrow. Fix the layout so everything fits properly on one screen — file type filters and category tags should both be visible, and the document viewer should have enough space to read the content.

Use this if the layout breaks after adding file type filters. Send a screenshot to your agent to help it understand what needs fixing.

Tips & Reverse Prompting Ideas

Reverse Prompting for Projects

Once your projects are set up, use these prompts to get the most out of them:

Goal	Prompt
Find what to work on next	Look at our projects in Mission Control. What's one task we can do right now that will help us make progress on one of our major projects?
Identify your projects	If you were to list the five most important projects we're working on right now, what would they be?
Start your day	Look at our projects and the task board. What should I focus on today to make the most progress?
Check project health	Which of our projects is most at risk of falling behind? What can we do about it?
Weekly review	Give me a weekly summary of progress across all our projects. What moved forward and what's stuck?

Tip: Fix visual issues fast. Take a screenshot of the dashboard (Cmd+Shift+4 on Mac, Win+Shift+S on Windows), drag it into Telegram, and describe what needs fixing. The agent will see exactly what you see and fix it much faster than describing the problem in words.

Troubleshooting

Situation	What to do
Projects screen is empty	That's expected. Add projects manually through the dashboard form, or tell your agent to add them via Telegram using Prompt 2.
Agent added wrong project details	Use the Edit button on any project card to update the name, description, status, progress, or milestone.
Portfolio snapshot not updating	Refresh the browser. The snapshot counts update based on project statuses in the database.
Documents screen shows config/system files	This is normal — it indexes all workspace files. Use the category and file type filters to find what you need.
Documents layout broke after adding filters	Send a screenshot to the agent with Prompt 6 and describe what's wrong. The agent will fix the layout.
Category tags disappeared	This can happen when the agent rebuilds the page. Tell the agent to add both category tags AND file type filters visible at the same time.
Document viewer too narrow	Tell the agent: 'Make the document viewer panel wider so I can read the full content comfortably.'
Mission Control crashed	Tell your agent: 'Mission Control is down. Restart it on port 3007 in production mode.'
Browser shows connection error	Check if the SSH tunnel is still open. If not, re-run: <code>ssh -N -L 3007:127.0.0.1:3007 root@TAILSCALE_IP</code>

What You've Built

- ✓ Projects screen with project cards, progress bars, statuses, and milestones
- ✓ Portfolio snapshot showing high-level status overview
- ✓ Add, edit, and delete projects from the dashboard
- ✓ Add projects via Telegram — agent fills in details from User.md
- ✓ Reverse prompting to figure out what to work on next
- ✓ Documents screen with search by filename and content
- ✓ Category filters (journals, newsletters, docs, notes)
- ✓ File type filters (.md, .html, .pdf, .txt)

✓ Document viewer — click any file to read the full content
